

View MicroMD appointments in Microsoft Outlook

The Micro-Office Outlook Interface will replicate the MicroMD appointment schedule into your Microsoft Outlook 2003 client. As appointments are scheduled, moved, or cancelled in MicroMD, the information will be reflected in near real-time on the Outlook client. Using the Micro-Office Outlook Add-In, the interface can be customized directly from the Outlook menu. Besides filtering for which providers you would like to see reflected in Outlook, you can also control which patient demographic data appears in the Outlook schedule, and in what layout. For a practice wishing to replicate the appointment schedule to multiple Outlook clients, each client can be configured to display a different provider, or to display the appointments in a different format.

Feature List

Outlook Interface includes:

- Near real-time update of information from MicroMD.
- Filter Outlook client by provider
- Customize schedule entries in Outlook with patient demographics, insurance information, appointment type, etc..
- Outlook can be configured to color-code appointments by appointment type, provider, or any other criteria

- A single interface can transfer data from multiple practices within the same MicroMD database.
