The Most Complete Open-Item Conversion Available

Did you know that Medical Manager allows longer diagnosis and procedure codes than MicroMD? And that MicroMD allows for separate performing and billing physicians, while Medical Manager (v. 9 and earlier) does not? Or that MicroMD supports multiple locations, while Medical Manager does not? Our conversion process deals with the above issues and many, many more.

Our pre-conversion Microsoft Access® database will alert you to potential mapping problems in advance, so you can take corrective action either before or after the conversion process. It will also allow for the specification of a number of Medical Manager® → MicroMD® mappings, giving you greater control over the mapping process. For example, multiple Medical Manager® providers can be combined into a single MicroMD® provider by just filling out a simple table.

Our open-item conversion will, in most cases, balance to Medical Manager A/R to the penny, and is designed so that you can close Medical Manager on Friday afternoon and begin receiving remittance into MicroMD on Monday (or even overnight!)

Practices have used many methods to adapt Medical Manager's shortcomings to fit their needs. Our conversion process already handles many of these standard methods, so your "ad hoc" customizations in Medical Manager can become clean data in MicroMD. Of course, if you need additional customization for your practice's conversion, you can count on Micro-Office Systems to work with you on developing the best possible conversion for your medical practice.

Additionally, Micro-Office Systems has combined advanced software optimization skills with state-of-the-art hardware to provide you with 24 hour turnaround time in most cases¹ – even if multiple conversions need to be run on the same day!

The conversion process supports Medical Manager versions 8.x and higher as well as all active versions of MicroMD.

Advanced Features Include

- Combine multiple Med Mgr datasets into multiple practices of a single MicroMD database
- Combine multiple Med Mgr datasets into a single MicroMD practice
- Exclude / combine providers
- Combine charges into sequences based on user-defined criteria.
- Archive procedure history data to an Access database
- Map Med Mgr adjustment codes to MicroMD writeoff and adjustment procedure codes.
- Add on Clinical History module for viewing Med Mgr clinical history in MD

¹ 24 hour turnaround is typical and expected, but not guaranteed
